Bachelor in Physics
(Academic Year 2022-23)

Optics		Code	800500	Year	2nd	Sem.	2nd
Module	General Core	**Topic**	Classical Physics		**Character**		Obligatory

	Total	Theory	Exercises
ECTS Credits	7.5	4.5	3
Semester hours	69	39	30

Learning Objectives (according to the Degree's Verification Document)

1. To get knowledge of the polarized light representations.
2. To understand light propagation in homogenous medium.
3. To understand the coherence concept.
4. To get knowledge of interference and diffraction processes and fundaments in interferometers and diffraction grating.

Brief description of contents

Polarization and electromagnetic waves in vacuum. Light propagation in homogeneous medium. Coherence. Interference. Interferometers. Scalar Diffraction Theory. Resolution power. Diffraction granting.

Prerequisites

Algebra. Calculus. Physics Fundamental.

Coordinator	José A. Rodrigo Martín-Romo		**Dept.**	OP
	Room	315.0	**e-mail**	jarmar@ucm.es

Theory/Exercises – Schedule and Teaching Staff

Syllabus

1.- Electromagnetic waves in vacuum: Electromagnetic spectrum. Monochromatic waves. Maxwell's equations. Poynting vector. Electromagnetic plane waves. Characterization of polarization.

2.- Light propagation through homogeneous media: Optical characterization of media. Refractive index. Reflection and refraction of light. Scalar theory of light propagation through homogeneous media.

3.- Interference: Introduction to the Theory of Coherence. Field superposition. Interferometers.

4.- Scalar theory of Diffraction: Fraunhofer and Fresnel approximations. Resolving power of optical instruments. Diffraction gratings. Introduction to spatial-frequency filtering.

Bibliography

Online Resources

- Teaching material (notes, presentations, videorecordings, web links with pedagogical interest, etc.) used in theory lectures and practice sessions will be made available through the Virtual Campus.

- Online tutoring/mentoring, either individual or group sessions, with the format of video conferences (through Microsoft Teams, Google Meet, Zoom) upon prior appointment, or by email.

Methodology

The course includes the following training activities:

− Theory lectures, where the contents of the course will be presented and discussed, illustrated by means of examples and applications.

− Practice sessions, aimed at problem solving and where teaching experiences may also be delivered, as well as other activities, e.g., focused discussions, oral presentations, etc.

− Tutorials, aimed at discussing and solving technical questions either at a personal level or in small groups.

In the classroom, the teacher may make use of the blackboard, multimedia resources (e.g., projected presentations), computer simulations, etc.

The Virtual Campus will be used to promote and support both the contact and the exchange of information with students.

Evaluation Criteria		
Exams	**Weight:**	55 %
There will be a written final exam.		
Other Activities	**Weight:**	45 %
Along the term, there might be 2 or 3 written midterm examinations during teaching hours, as well as other supplementary activities, such as delivery of problems and exercises proposed by the teacher, activities through the Virtual Campus, etc.		
Final Mark		

The final mark will comprise the following contributions:

* A written final examination covering all the contents delivered in the course, with two independent parts: either a quiz or a test with brief questions, and a problem solving exam.

* A summative assessment coming up from two contributions:
   - Written midterm examinations, each consisting of either a quiz or a test with brief questions.
   - Other activities performed either in the classroom or outside.

The final mark, on a 0-10 scale, will be:

$$F = 0.55 \, F2 + Max(0.45 \, F1, \, 0.35 \, ME + 0.1 \, OA)$$

F = Final mark.
F1 = Final written examination: part concerning the quiz or brief questions.
F2 = Final written examination: part concerning the problem solving.
ME = Average arising from the written midterm examinations.
OA = Other activities.
Any mark in the equation is on a 0-10 scale.

Should the score obtained from the summative assessment be ME > 5, the part of the final mark concerning the quiz or brief questions F1 can be skipped. Yet the student might carry it out in order to get a higher score.

The marks ME and OA considered in the May-June ordinary final exam will also be kept, would it be the case, for the July extraordinary final exam.
